PREFACE

As part of the 1961 Census, big and growing Cities with a population of more than one million have been studied in detail. Madras is one of the seven such Cities in India, others being in order of population Bombay, Calcutta, Delhi, Ahmedabad, Hyderabad and Bangalore. The report on Madras City will be published in three parts. The first part will contain a narrative description of the origin and growth of Madras City, its history, distribution of population, and administration. It is under preparation. The second part will deal with the various characteristics of migrants to the City, particulars relating to which were prepared in the form of special tables compiled from the Census slips of Madras City. This part has already been published. The present volume is the third part and presents to the reader the general Census tables and the Primary Census Abstracts relating to all the divisions of the Madras Corporation. Similar information for the districts has been published in the District Census Handbook of each district. This volume, it is hoped, will serve as a useful compendium of statistics relating to Madras City to Research Scholars and Planners.

GENERAL POPULATION TABLES

('A' SERIES)

TABLE A-I

AREA, HOUSES AND POPULATION

FLY LEAF

Table A-I furnishes data on area, houses and population in Madras City.

The area of Madras City as per 1961 Census is the same as the one that prevailed in 1951 *viz.*, 48·9 square miles. With a constant area and an increasing population, the density of population per square mile has naturally increased from 28,958 in 1951 to 35,339 in 1961. The population of Madras City is composed of 909,701 males and 819,440 females yielding a sex ratio of 901 females per 1,000 males. In 1951, the sex ratio was 921 females per 1,000 males.

The population of the various divisions of Madras City ranges from 9,951 in division No. 28 to 31,663 in division No. 91. The first five divisions recording large number of persons are :

Division	91	Aminjikarai	...	31,663
do	92	Vadapalani	...	30,461
do	96	Kamarajanagar	...	27,588
do	99	Guindy	...	24,351
do	89	Raja Annamalaipuram	...	24,140

The divisions which are sparsely populated are :

Division	28	Trevelyan Basin	...	9,951
do	36	Pattalam	...	10,344
do	29	Elephant Gate	...	10,575
do	16	Ammankoil (South)	...	10,877
do	15	Mannady	...	11,432

But the ranking of divisions by area indicates that only two of the five divisions which rank high by population, also rank high by area. The two divisions are Raja Annamalaipuram and Guindy.

Division 99 which ranks first by area is fourth in rank by population ; division 89 ranks fifth both in area and population.

The first five divisions by area are :—

				Area in Acres
Division	99	Guindy	...	3,407
do	43	Agaram	...	1,697
do	51	Shenoy Nagar	...	1,529
do	1	New Washermanpet	...	1,384
do	89	Raja Annamalaipuram		1,278

These divisions have an area of more than 1,000 acres. The divisions having very small area are :—

				Area in Acres
Division	12	Ammankoil (North)	...	33
do	16	Ammankoil (South)	...	33
do	27	Perumalkoil Gardens	...	34
do	29	Elephant Gate	...	39
do	37	Tattankulam	...	42

Thus, divisions 16 and 29 have recorded low population as well as low area.

VARIATION IN POPULATION DURING SIXTY YEARS

FLY LEAF

Table A-II indicates variation in population during the last sixty years. Normally, this table shows population of a unit in earlier years adjusted to the present jurisdiction. However, since the area of of Madras did not change between 1951 and 1961, no further adjustment was necessary. The population of earlier Censuses refers to the present area of 48·9 square miles. The earlier figures indicate the probable population if the present area had existed then.

Table A-III which relates to villages classified by population does not apply to Madras City since it is a separate district without any village.

TOWNS (AND TOWN-GROUPS) CLASSIFIED BY POPULATION IN 1961 WITH VARIATION SINCE 1901

FLY LEAF

Table A-IV indicates the population of Madras City as it existed in earlier years without any adjustment for the present jurisdiction. The sex ratio of Madras City works out to 900 females per 1,000 males. In only one division of Madras City the sex ratio is above 1,000. In Santhome division (No. 85), there are 9,532 females and 8,744 males giving a sex ratio of 1,090. In all the other divisions, the sex ratio is less than 1,000. The lowest sex ratio of 621 is at Park Town. The other divisions with preponderant male population are Harbour (626), Sowcarpet (698), Kachaleeswarar (652) and Kothawal Chavadi (708). Twenty-six out of 100 divisions have recorded sex ratio less than that of Madras City average.

PRIMARY CENSUS ABSTRACT

FLY LEAF

Classification of population into workers and non-workers and workers into nine industrial categories is made and presented in the primary census abstract. According to 1961 Census, a person may be working as cultivator or as an agricultural labourer or in any household industry or may be engaged in doing some other work. This "some other work" includes persons who are engaged in productive activities other than cultivation, business, trade, communication or transport service or other miscellaneous services. In the case of persons who are employed during certain specified seasons only, as in cultivation, livestock, household industry, he will be regarded as worker provided he has some regular work for more than an hour per day throughout the greater part of the working season. In the case of persons regularly employed in any trade, profession, service or business or commerce, he will be considered as a worker if he was employed during any of the 15 days preceding the day of enumeration. A person who works but was absent from his work during the 15 days preceding the day on which he was enumerated due to illness or other causes was treated as a worker. Work includes not only manual labour but also effective supervision and direction. For example, an owner of a piece of land was treated as a worker if he supervised and directed cultivation without actually ploughing and harvesting himself. Apprentice trainees, irrespective of whether it was stipendiary or non-stipendiary were treated as workers. A public or social worker engaged in public or social work or a political worker actually engaged in furthering the political aims of his party was also regarded as a worker. Under-trial prisoners or persons who were in jail but were not convicted by Court of Law were regarded as workers if they were engaged in any of the activities which are considered as work, before their arrest. Similarly, persons who were admitted in hospitals were considered as workers if they were engaged in activities which are considered as work, before they were admitted.

A person who has secured employment or has been offered a job but has not actually joined duty was regarded as a non-worker. Any adult woman engaged in household duties was not considered as a worker. But, if in addition to her household duties she was engaged in items of work like hand-pounding of rice, spinning of cotton, etc. which gives her some reward either in cash or in kind or was employed on domestic duties for wages as servant maid, ayah, cook or was employed in selling firewood, cutting and selling of grass, etc. she was regarded as a worker.

Beggars, pensioners, rent receivers who were earning an income but were not participating in any productive work were not considered as workers, unless they were also engaged in industry, trade or commerce. Those who were long term inmates of penal, charitable or mental institutions, even though they were previously engaged in activities which satisfy our definition of work, were regarded as non-workers.

The workers were divided into nine industrial categories. These categories are (1) Cultivation, (2) Agricultural Labourer, (3) Mining and Quarrying, (4) Household Industry, (5) Manufacturing other than Household Industry, (6) Construction, (7) Trade and Commerce, (8) Transport, Storage and Communications and (9) Other Services.

A person is said to be a cultivator if he or she is engaged as an employer, single worker or family worker in (1) cultivation of land or supervision or direction of cultivation of land owned or held from Government ; (2) cultivation of land or supervision or direction of cultivation of land held from private persons or institutions for payment in money, kind or share in the produce of crop. It was not necessary that a person should own the land absolutely. Even if the land cultivated was held on lease or under a variety of tenure, the person was entitled to be regarded as a cultivator.

Household industry is defined as an industry conducted by the head of the household himself and/or by the members of the household at home or within the village in rural areas and only at home in urban areas. The industry should not also be run on the lines of a factory. For purposes of classifying as factory, an establishment should employ 20 persons when no power is used and 10 persons where some kind of power is used.

An household industry should also relate to the production, processing, servicing, repairing or making and selling of goods but should not be confined to the processes of buying and selling alone.

PRIMARY CENSUS ABSTRACT

The classification of workers among the other categories is based on the Indian Standard Industrial Classification. The industrial classification broadly divides the various industries into the following divisions.

0	Agriculture, Livestock, Forestry, Fishing and Hunting
1	Mining and Quarrying
2 & 3	Manufacturing
4	Construction
5	Electricity, Gas, Water and Sanitary Services
6	Trade and Commerce
7	Transport, Storage and Communications
8	Services
9	Activities not adequately described

Divisions 0 and 1 have been grouped together and treated as one category, Mining and Quarrying, etc. Divisions 5, 8, and 9 have been treated as Other Services and divisions 2 and 3 as Manufacturing. The other industrial divisions have been treated as separate industrial categories.

Apart from this information on classification of population into workers and non-workers, the primary census abstract also gives particulars regarding number of occupied residential houses and households, number of Scheduled Castes and Scheduled Tribes and number of literate and educated persons.

In Madras City, there are 214,103 Scheduled Castes which works out to 12·38% of total population of the city. The total number of Scheduled Tribes is only 1,396 or 0·08 of population. The percentage of Scheduled Caste population in Madras State itself is only 18·01 and the percentage of Scheduled Tribe population is only 0·7. Madras City ranks fourth among the cities with a population of over 50,000, in respect of percentage of male and female Scheduled Caste population. The percentages are :

		Males	Females
Madras	...	12·16	12·63
Valparai	...	44·85	46·05
Ootacamund	...	18·03	19·55
Rajapalayam	...	12·77	12·92

Though there are 28 cities and towns with total population above 50,000, only 15 towns have got Scheduled Tribe population and among these, Madras ranks sixth though it has got only a Scheduled Tribe population of 0·07% among males and 0·09% among females.

The important divisions within the city which have recorded Scheduled Caste population are :

				Males	Females
Division	9	Meenakshiammanpet	...	2,627	2,433

do	99	Guindy	...	2,287	2,093

Scheduled Tribes are important only in the following three divisions :

			Males	Females
Division	12	Ammankoil North	120	134
do	33	Pulianthope	257	276
do	92	Vadapalani	163	161

In other divisions, the figures are very low.

In Madras City, 59% of the population are literates which compares very favourably with the State average of 31%. Madras City in fact leads Madras State by recording maximum percentage of literates. As can be naturally expected, female literacy is lower than male literacy, the respective percentages being 48 and 70. In both male and female literacy, Madras City ranks first among all the other districts in the State. But when Madras City is compared with towns of over 50,000, it is seen that it loses its importance because highest percentage of 60·46 is recorded by Mayuram followed very closely by Coimbatore with 60·19. The third, fourth and fifth ranks are held by Palayamcottai (59·96), Nagercoil (59·72) and Kumbakonam (59·68) respectively and Madras City occupies only sixth rank with 59·47%. When male literacy is taken into consideration, Madras is relegated to tenth rank, but in female literacy it holds the third rank preceded by Nagercoil and Palayamcottai. The divisions in Madras City which have recorded high percentage of male literates are as follows :—

Division	18	Sowcarpet	...	82%
do	49	Perumalpet	...	81%
do	61	Gangadhareswararkoil	...	80%
do	73	Chepauk	...	82%

Female literacy is high in the following divisions:—

Division	18	Sowcarpet	...	66%
do	52	Kilpauk	...	63%
do	61	Gangadhareswararkoil	...	63%

GENERAL ECONOMIC TABLES

B-SERIES

(B I to B IX)

Preliminary Note on Salient Features

TABLE B-I

It is seen from this table which presents the data on workers category wise classified by broad age groups *viz.* 0-14, 15-34, 35-59 and 60 and above, that the maximum proportion of workers is recorded in the middle age groups. There are 532 per 1,000 workers in the age group 15-34 and 419 per 1,000 in the age group 35-59. The proportions in 0-14 and 60+ are negligible being only 17 and 33 per 1,000 respectively. But when the composition by sex is taken into consideration, it is found that the proportion of female workers is much more than the male workers in the lower and the higher age groups of 0-14 and 60 and above. However, male workers are found to be more in the middle age groups 15-34 and 35-59.

Considering the proportion of workers for the State it is seen that the maximum proportion is recorded in the middle age groups: 482 per 1,000 in the age group 15-34 and 391 per 1,000 in the age group 35-59. The proportion of female workers in the age group 0-14 and 15-34 is higher than that of the male workers. In the age groups 35-59 and 60 and above, the proportion of male workers is more than that of female workers.

Age Group 0—14

Cultivators and agricultural labourers are negligible in Madras City and in the categories of construction and transport too we find negligible representation. The sex composition in category IV (household industry) shows that proportion of female workers outnumbers the male workers. There is only one male in every 1,000 while there are 5 females working per 1,000 belonging to this age group. In category IX (other services) also, the proportion of females outnumbers males. In category VII, (trade and commerce) female workers of this age-group are negligible.

Even when compared to urban areas of the other districts, so far as the proportions of workers in age group 0-14 are concerned, Madras City has the least proportion. The first place is held by Salem urban area where the proportion is 70. Ramanathapuram district urban has 55 persons out of every 1,000 in this age group. Tirunelveli urban holds the third place with 53 persons per 1,000. North Arcot urban has 45 persons while Chingleput and Madurai have 41 persons per 1,000. There are two districts where there are 40 persons per 1,000, namely Coimbatore and Kanyakumari. The rest of the districts have less than the State average of 39. The City holds the last place with 17 persons per 1,000.

The proportion in the age group 0-14 per 1,000 in each category of workers compares as follows for the State and City.

Madras is the only urban area where there are no male and female cultivators or agricultural labourers in this age group.

Age Group 15—34

The maximum proportion of workers in Madras City belongs to the middle age group of 15-34. The total workers form 535 per 1,000 of the working population, males being 534 per 1,000 and females 507 per 1,000.

Cultivators and agricultural labourers are negligible even in this age group, the maximum being in other services where there are 194 persons followed by manufacturing in which there are 138 persons per 1,000.

In other services, proportion of females outnumbers males. There are 346 per 1,000 among females while there are only 178 per 1,000 among males. In categories of manufacturing, construction, trade and commerce and transport etc., males are found to be more than females, the maximum difference being in manufacturing where there are 149 males per 1,000 against 37 females per 1,000 followed by the trade and commerce category, where there are 102 males per 1,000 against 41 females. In household industry, the female proportion is higher than that of males, the females being 42 per 1,000 against nine males per 1,000.

The total workers for the State form 482 per 1,000 and in urban areas it is 500 per 1,000. The City has recorded more proportion than the State total and urban total of the State. There are 534 males per 1,000 in City, while the State figure is 475 per 1,000 and in urban it is 501 per 1,000. Among females the City has recorded 507 per 1,000 while the State total and urban totals are 496 and 495 per 1,000 respectively.

There are practically none in the categories, cultivators and agricultural labourers when compared to State total of 190 and 95 per 1,000 respectively. Except in the two categories of mining and household industry where there are six and 13 persons per 1,000, the rest of the categories, manufacturing, construction, trade and commerce, transport and other services have recorded more than the State average. In mining, there are six persons per 1,000 and the State average for this category shows 13 per 1,000. In household industry, Madras City has recorded 13 persons per 1,000 while the State has recorded 40 persons per 1,000.

The transport category which holds the fourth rank has outnumbered the State average. The City has 63 persons per 1,000 in this industrial category while the State figure is only eight persons per 1,000. In manufacturing, there are 138 persons per 1,000 workers in City. The State average for this category of work is 30 persons per 1,000. This category holds the second rank. In State, this category holds only the fifth rank. In trade and commerce, City has recorded 96 persons per 1,000 while the State figure is only 22 persons per 1,000.

The proportion of working population for this age group for each industrial category compares as follows with the State :—

Category of workers	State		City	
	Rank	Proportion	Rank	Proportion
Cultivator ...	I	190	...	...

The proportions in four districts are more than the proportion in the State as a whole. One district has the same proportion as the State. Eight districts have got proportions less than the State. The maximum proportion of workers in this age group is in Nilgiris district which has recorded 554 persons per 1,000 workers. Madras City has the next highest proportion of 532 per 1,000 workers. Of the negligible proportion of cultivators and agricultural labourers in the City, 433 and 347 out of 1,000 total workers are found in this age group. The maximum proportion is found in the category of manufacturing where there are 563 out of 1,000; other services has 534 out of 1,000 and transport 532 out of 1,000. These categories have recorded more than the total average of 532 workers out of 1,000. These categories have also recorded more than the State average for the particular category and also that of the total urban. The categories, household industry, construction and trade and commerce though having less than that of the total workers for the City have recorded above that of the State and urban total for the particular categories. In mining, Madras City has recorded less than the State and urban total.

From the following statement the representation of each category of workers in every 1,000 in the City could be compared with that of the State and other urban areas.

Age Group 35-59

Next to the age group 15-34, the maximum proportion of workers in City is recorded in this age group. The total workers in 35-59 form 419 per 1,000 working population, males being 419 and females 416 per 1,000 each.

The workers in the categories, cultivators and agricultural labourers are negligible. In this age group the maximum is in the category other services where there are 151 persons working out of 1,000 worker.

Proportion of females is found to be higher than that of males in the categories of other services and household industry. There are 272 females per 1,000 in the category other services while the males are only 137 per 1,000. In household industry, the proportion of females is 27 per 1,000, males being only 8 per 1,000.

The maximum difference between males and females is found in the category of transport. In this category, there are 58 males per 1,000 against 9 per 1,000 females. Also, in the category manufacturing we find a large difference. There are 103 males per 1,000 against 26 females per 1,000. In the remaining categories of mining, construction and trade and commerce, though the male workers are found to be more, the difference between the proportions is not very high. In mining, there are 7 males per 1,000 against 3 females per 1,000; in the construction category there are 19 males per 1,000 against 14 females per 1,000 and in the trade and commerce category there are 87 males per 1,000 while the females are 65 per 1,000.

The proportion of total workers in the City is more than that of the State. The State's proportion is 391 persons per 1,000 against the City average of 419 persons per 1,000. The proportion of male workers in City is 419 per 1,000 and female workers form 416 per 1,000 while the State average is only 397 males and 377 females per 1,000 each.

As in the other two age groups, the proportions of cultivators and agricultural labourers are negligible when compared with State figures of 174 and 64 per 1,000 respectively. Except in the two categories of mining and household industry, in the other categories, Madras City has recorded more than the State propor-

tions. Mining, etc., has recorded 7 persons per 1,000 and household industry 10 persons per 1,000 for which the State averages are 9 and 27 persons per 1,000 respectively. The maximum proportion of workers is in the category, other services. The number of persons in this category is 151 per 1,000 while in the State there are only 61 workers per 1,000. The City has also recorded more than that of the other urban areas of the State for which the proportion is 116 persons per 1,000. In manufacturing, City has 95 workers out of 1,000. The State and the urban figures are 20 and 72 per 1,000 respectively. In the category trade and commerce, the number of persons engaged in City is 84 per 1,000. The State figure is 23 and the urban figure is 69 persons per 1,000. In transport category, the City's contribution per 1,000 is 53 while the State has only 8 and the urban areas of the State have 31 persons. The other category which has recorded more than that of the State and the urban is construction where 19 persons are recorded per 1,000 against 5 and 15 per 1,000 for the State and urban respectively.

The proportion of working population for each ndustrial category of workers per 1,000 compares as follows with the State :—

The proportion of working population in this age group for each district of the State is as follows:—

Seven districts have recorded more than the State average of 391 and one district has the same figure as the State. Madras City has recorded the highest proportion of workers in the State with 419 persons working out of every 1,000.

The distribution of 1,000 workers in each category by age groups gives us the picture that the second highest proportion of workers comes under this age group next to the age group of 15—34. Out of the total 1,000 workers, 419 are recorded in this age group. Of the negligible representation in cultivators and agricultural labourers, there are 404 and 497 in this age group. The cultivators hold the second place next to 15—34 age group while agricultural labourers have recorded the first place in this age group.

The maximum number per 1,000 workers in each category is recorded in mining where there are 497 persons per 1,000. This is even higher than that of the other age group, 15—34 in which only 347 workers are found. In transport, the proportion of workers in this age group is 450. Trade and commerce have recorded

442 persons in this age group. Construction has 441 persons while other services has only 414 persons per 1,000. In household industry and manufacturing other than household industry the proportions in the age group are only 395 and 389 respectively.

The following statement gives us a comparative picture of the 1,000 workers of the City in each category with that of the State and the other urban total of the State.

The City has 33 persons, 32 males and 42 females per 1,000 in each. Madras City has recorded the least proportion of workers when compared to other districts of the State, except Nilgiris where the proportion is 32.

Cultivators and agricultural labourers are negligible in the City when compared to the State figures of 34 and 8 per 1,000. It can be seen from the above statement that of the literates, persons who are literates without educational standard are found to have the maximum proportion with 245 per 1,000 followed by primary or junior basic with 233 per 1,000. Matriculates are 93 per 1,000 while those who have an University degree or post-graduate degree are 18 per 1,000. Those who have technical degree or diploma equal to degree or post-graduate degree are four per 1,000. Those who hold technical diploma not equal to degree are two per every 1,000.

Engineers (1·24 per 1,000), Teachers (1·19 per 1,000) and Doctors (1·00 per 1,000) form the major proportion among technically qualified people.

In the sex composition, proportion of males is found to be more in all educational standards. Among literates without educational standard, there are 260 males against 227 females per 1,000. Among those who possess primary or junior basic education, there are 261 males and 203 females. There are 135 males per 1,000 whereas females form only 46 per 1,000.

In technical diploma, the proportion of females is negligible. Among those having University degree or post-graduate degree, there are 30 males in every 1,000 as against only five females per 1,000.

Among those who have technical degree, five per 1,000 are found among males and two per 1,000 among females. Among females, teachers form 1·20 per 1,000 and doctors 0·58 per 1,000. Among males, the highest proportion among technical degree holders is found to be in engineering. 2·35 males per 1,000 belong to this educational standard. Doctors are 1·39 per 1,000 and teachers' contribution per 1,000 is 1·19. Males are to be found in all categories. But among females we have none with agricultural, technological and other degrees.

Among those who have technical and non-technical diploma not equal to degree, males have recorded four and one per 1,000 respectively. The proportions of females in the above educational standards are negligible being 0·21 and 0·07.

Technical and non-technical diploma holders of one and 0·23 per 1,000 respectively are recorded in the State. In City, the proportions in these two standards are two and 0·33 respectively. Among graduates, the State has seven persons in 1,000 while in City we find 18 in every 1,000.

Technically qualified persons are only two in the State for 1,000 but in City we find four persons per 1,000.

From the statement it can also be seen that City has recorded more proportion than that of the State in almost all educational standards.

From the above statement, it is seen that the minimum proportion of illiterates is found in Madras City. Only 4 districts have recorded less than the State average of 501 persons per 1,000 *viz.*, Madras 405, Kanyakumari 424, Thanjavur 481 and Tiruchirapalli 483 per 1,000. The maximum proportion of illiterates is found in Salem where 587 out of every 1,000 are illiterates. Except among literates without educational standard, Madras City has recorded the highest proportion in every educational standard. Proportion of literates without educational level in the City is less than the State average of 270 per 1,000 and also less than those of the other districts of the State except Salem and Nilgiris which have recorded less than Madras.

In the third educational standard of primary or junior basic, Madras has recorded more than the State average. Among the other districts which have more than the State average, Tiruchirapalli has the highest proportion in this standard with 178 persons per 1,000. The proportion of matriculates in the City is also more than the State average. Only Tiruchirapalli and Kanyakumari districts have recorded more than the State average in this educational standard.

The proportion of 18 per 1,000 graduates in Madras is more than that of the State and also of Kanyakumari district which has recorded the second highest proportion of 8 per 1,000. Among the technically qualified persons, there are 4 in every 1,000 in Madras City. The State average for this educational group is only 2 per 1,000. Only four districts have recorded less than the State average and Madras with 4 per 1,000 and Kanyakumari with 3 per 1,000 have recorded more than the State average. Seven districts have the same figure of 2 per 1,000.

It can be seen from the above statement that Madras City has the maximum proportion of literates in the State. Even among literates, literates without educational standard constitute only 41% of the total literates.

In Madras State, the proportion of literates without educational standard works out to 54% of the total literates, and the literates with educational standard constitute only 46% of the total literates.

The proportion of persons with primary or junior basic standard is the maximum in the City with 276 per 1,000. Workers who are literates without educational level are 234 per 1,000 while those who are matriculates or higher secondary are 180 per 1,000. Graduates among workers are 40 per 1,000 and technically qualified persons are 16 including diploma holders. Persons in the different educational standard among 1,000 workers for the urban areas of the State and Madras City can be compared from the following statement.

From the above statement, it can be seen that in the State, illiterates form the maximum proportion among workers. Among literates, the proportion of workers having no educational standard is very high. Among those who have educational level, the maximum proportion of workers belong to the primary or junior basic standard. But in City, the maximum proportion of workers are from primary or junior basic standard, followed by literates without any educational standard. In the category 'illiterates' and in the category 'literates without educational level' among workers, the proportions for the City are less than the corresponding proportions for the State. The proportion is more in all other important educational levels.

The following statement gives the distribution of 1,000 male and 1,000 female workers by important educational standards in Madras City.

Educational Standard	Males	Females

Technical degree ...	8	21

Working females who have technical degree or diploma equal to degree or post-graduate degree form a higher proportion than males. There are 21 females per 1,000 while among males there are only eight per 1,000. The educational standard of the working population in City can be compared with that of the State in the following statement:

District	Illiterate		Literate (without educational level)		Primary or junior basic		Matriculation or higher secondary		University degree		Technical degree

Among literates without any educational level, the male proportion is less in City but among females, figures are equal. In primary or junior basic, both males and females have more than the State figure. In matriculation, females have recorded a higher proportion and the maximum proportion of females is recorded in this educational standard. Male graduates form a higher proportion in the City than in the State. Among technical degree holders, the proportion of females is more than that of males in the City.

TABLE B IV Part C

In Division 8, Major Groups 88, 89 and 80 namely Personal Services, Services not elsewhere classified and Public Services have recorded the highest proportion of workers.

In the Industrial Divisions 2 and 3, the maximum proportion of workers is found in the Major Groups 38, 23 and 30 relating to manufacture of transport equipments, cotton textiles and industries relating to printing and publishing respectively.

Among all the Major Groups, Groups 64–68 relating to retail trade account for the maximum number of 63,519 workers. The next highest representation of 52,665 is found in Major Group 88 (Personal Services) and next to this there are 52,063 in Major Groups 70–71 (Transport).

TABLE B-IX

The total number of non-workers in Madras City is 1,202,160 persons. It forms 70% of the total population in the City. The male non-workers constitute 48% of the male population and female non-workers 94% of the female population.

The distribution of 1,000 non-workers by age group for Madras City and Madras State are as follows :

Age group	Madras City	Madras State
0—14	514	635
15—34	307	203
35—59	134	110
60+	45	52

The distribution of 1,000 male and 1,000 female non-workers by age groups for Madras City and State are as follows :

Age groups	Madras City		Madras State	
	Males	Females	Males	Females
0—14	718	398	851	508
15—34	193	372	91	269
35—59	42	186	21	163
60+	47	44	37	60

Madras City has recorded less proportion of males and females in the lower age group of 0–14. There are 718 males and 398 females per 1,000 against 851 and 508 per 1,000 in the State. In age group 15-34 the proportion of 193 males and 372 females per 1,000 in City are more than 91 males and 269 females per 1,000 in the State. Even in the age group 35-59 Madras with a proportion of 42 males and 186 females has recorded more than 21 males and 163 females per 1,000 of the State population.

In the age group 60+ the proportion of 47 males in Madras City is more than 37 males per 1,000 recorded in the State. 44 per 1,000 recorded in females in this age group are less than the proportion of 60 recorded by females in the State.

Madras City has recorded more than the State average in age groups 15–34, 35–59 and 60+ in males and in age groups 15–34 and 35–59 in females.

The maximum proportion of non-workers in City are found in the lower age group of 0–14. The distribution of these non-workers among the various categories of non-workers per 1,000 non-workers is as follows :

Type of Activity	Madras City		
	Persons	Males	Females
Students ...	452	498	406
Household duties ...	1	...	3
Dependents ...	545	500	590
Retired ...	...	...	...
Beggars ...	...	...	...
Inmates ...	1	1	1
Persons seeking employment for the first time	1	1	...
Out of employment & seeking employment	...	...	...

It can be seen that the maximum proportion of non-workers in this age group of 0–14 are dependents. The other category of non-workers in which the proportion is very high is students. Students among this age group are 452 per 1,000 and by sex break-up are 498 males and 406 females per 1,000. The proportion of other types of non-workers are negligible in this age group.

Distribution of the non-workers in the age group 15-34 in the various types of activity for City is as follows :

Type of Activity	Persons	Males	Females
Students ...	178	550	69
Household duties ...	670	...	867
Dependents ...	73	136	54
Retired & Rentiers ...	1	5	...
Beggars ...	1	2	...
Inmates ...	8	25	3
Persons seeking employment for the first time	52	211	5
Persons out of employment and seeking employment	17	71	2

From the above statement we can find that the maximum proportion of non-workers is in the category household duties. There are 670 persons per 1,000 non-workers. But when the sex composition is taken into consideration we find that there are no males in household duties in this age group. Females in this category of household duties are 867 per 1,000.

The next highest proportion of non-workers is found to be students. 178 out of 1,000 are students in this age group of 15-34. Male students (550 per 1,000) form the maximum proportion recorded among male non-workers among the eight types of categories. Females have recorded 69 per 1,000 students of the total population of female non-workers. Dependents have recorded the third rank in proportion with 73 persons per 1,000. There are 136 males per 1,000 and 54 females per 1,000 as dependents. Persons seeking employment for the first time have recorded a proportion of 52 per 1,000. Those who seek employment for the first time among males have recorded the second rank; females are only 5 per 1,000 in this category. Persons out of employment and seeking employment are 17 per 1,000, males being 71 per 1,000 and females being only 2 per 1,000. Inmates of penal, mental and charitable institutions are 8 per 1,000 persons in which males are 25 per 1,000 and females 3 per 1,000 and retired or rentiers are 1 per 1,000. There are negligible females in this category while males have recorded 5 per 1,000. Beggars are found one in every 1,000. Females in this category are also negligible while males have recorded 2 per 1,000.

It can be seen that the maximum proportion of males is students in this age group and the next highest representation is from never employed males followed by dependents. There are also 7% people who seek employment for the second time after being out of employment.

Among females, the house-wives or those who are engaged in household duties have recorded a maximum return of 87%. Students and dependents are 7% and 5% respectively while representation in other categories are negligible among female non-workers.

Distribution of 1,000 non-workers among the different categories for the age group 35-59 is as follows:—

Type of Activity	Persons	Males	Females
Students ...	1	3	...
Household duties ...	790	...	892
Dependents ...	109	251	91
Retired or Rentiers ...	56	400	12
Beggars ...	3	17	1
Inmates ...	12	75	3
Persons seeking employment for the first time	8	71	...
Persons out of employment and seeking employment	21	183	1

Students in this age group are negligible. There is only one person per 1,000 studying while in sex break up, males are 3 in 1,000 and females are negligible. In the second category of non-workers the total number of persons found are 790. There are 5 males in this category while females have the maximum proportion of 892 per 1,000.

There are 109 per 1,000 dependents on the whole. Dependents among males are 251 per 1,000 and that of females are 91 per 1,000. Males and females have the second highest proportion of non-workers in this group. There are 56 persons who are either retired or rentiers. Males have the highest proportion in the group with 400 per 1,000. Female contribution is only 12 per 1,000.

In general, the male non-workers of the age group are mostly retired or rentiers; dependents hold the second place while those who seek re-employment hold the third rank. Inmates have recorded more than those who are never employed. Others in this age group are negligible.

Among females, the maximum proportion is among housewives or those who are engaged in household duties. They form 89% of the total female non-workers of the age group. Dependents who have recorded the second place are only 9% of the total population while there is 1% of females who are either retired or rentiers. Distribution of 1,000 non-workers by sex and different groups of activity among the age group 60 and above is as follows:

Type of Activity	Persons	Males	Females
Students ...	...	...	...
Household duties ...	340	...	549
Dependents ...	348	275	392
Retired or Rentiers ...	287	679	48
Beggars ...	4	6	3
Inmates ...	10	15	7
Seeking employment for the first time ...	2	4	...
Out of employment and seeking employment ...	9	21	1

There are no students in this age group. Household duties with a proportion of 340 persons per 1,000 has the second largest proportion. Males being none, the proportion of females (549 per 1,000) holds the highest representation. Dependents are 348 per 1,000

persons. Dependent males with 275 per 1,000 and females with 392 per 1,000 have the second highest proportions among non-workers.

Retired or rentiers have recorded the third place and males with 679 per 1,000 have recorded the maximum among non-worker. Beggars are 4 per 1,000 persons, 6 per 1,000 males and 3 per 1,000 females. Inmates of penal, mental or charitable institutions are 10 per 1,000 total non-workers and 15 and 7 per 1,000 male and female non-workers respectively. Seekers of employment for the first time have recorded the minimum proportion of 2 per 1,000 non-workers. Male non-workers seeking employment for the first time are 4 per 1,000.

The total proportion of non-workers who were employed before and now out of employment and seeking employment is 9 per 1,000. There are 21 per 1,000 male non-workers who seek re-employment whereas the females who seek re-employment form only one per 1,000.

The male non-workers in the age group 60 and above are mostly retired or rentiers and dependents. They constitute 68% and 28% of the total males. The non-workers of other groups are negligible. Among the female non-workers 55% are engaged in household duties while another 39% are dependents. Non-workers having other activities among females are negligible.

The proportions of non-workers per 1,000 each of persons males and females in the nine towns having more than one lakh population are as follows:

Name of town		Persons	Males	Females
Thanjavur	...	698	509	891
Madras	...	695	478	937
Madurai	...	693	494	901
Tiruchirapalli	...	691	476	918
Vellore	...	688	472	910

Tuticorin	...	676	461	898
Coimbatore	...	657	452	888
Salem	...	626	455	804

It can be seen that Madras holds the second rank among non-workers. In males, Madras stands fourth and in females it stands first in having the maximum proportion of non-workers among cities having more than one lakh population. Salem has recorded the least proportion of non-workers and also female non-workers.

TABLE B-I

WORKERS AND NON-WORKERS CLASSIFIED BY SEX AND BROAD AGE GROUPS

FLY LEAF

The data relating to total workers, workers in each industrial category and non-workers, classified by four broad age-groups of 0-14, 15-34, 35-59 and 60 and over for the entire area of the district have been presented in this table. Figures for males and females are also given separately. As the entire area of Madras is treated as urban, the figures for total and urban are the same.

In 1961 Census, all municipalities, cantonments and townships were treated as urban areas. Other areas satisfying the following principles were also treated as urban areas:—

(i) the population of the area should not be less than 5,000;

(ii) 75% of the male population should depend on non-agricultural activity for their livelihood; and

(iii) the density should be 1,000 persons per sq. mile.

Some places in which only two of the three conditions were satisfied, and which had definite urban characteristics were also declared as urban. This applied mainly to newly founded industrial areas, large housing settlements, places of tourists importance with all civic amenities, areas surrounding the municipal or cantonment limits, lying outside their jurisdiction.

Township is a new concept introduced in this census. Towns which are either contiguous or near each other having separate legally constituted civic administration like municipality, panchayat, cantonment or a township have been grouped together to form a town group which will serve as a unit for statistical purposes. 34 town groups have been formed in this State.

The towns including town group have been graded into six classes, based on their population. Class I represents towns of population of 1,00,000 and above and these are known as cities. There are 11 Class I towns, including town groups. Of these 11 towns, 7 are cities and 4 are town groups. The entire Madras belongs to Class I and is treated as City. The Volume Part II-A can be referred for greater details regarding the classification and grading of urban area.

TABLE B-III—PART-A

INDUSTRIAL CLASSIFICATION OF WORKERS AND NON-WORKERS BY EDUCATIONAL LEVELS

FLY LEAF

This table prepared in two parts presents the level of literacy among each category of worker and non-worker in the urban and rural areas respectively. The term 'Literate' in Census denotes any person who is able to read and write even a simple letter. In Part A, the literates have been classified into seven major classifications *viz.*, the literates without any educational standard, primary or junior basic, matriculation or higher secondary, technical diploma not equal to degree, non-technical diploma not equal to degree, University degree or post-graduate degree other than technical degree and technical degree or diploma equal to degree or post-graduate degree. The last mentioned educational classification has been further split into six important branches of technical science *viz.*, engineering, medicine, agriculture, veterinary and dairying, technology and teaching and data have been furnished for these branches also separately. In Part B only three classifications of educational levels have been adopted *viz.*, literates without any educational standard, primary or junior basic and matriculation and above. As Madras City is entirely an urban area only Part A is prepared for this table for Madras.

TABLE B-IV—PARTS A, B & C

INDUSTRIAL CLASSIFICATION OF PERSONS AT WORK OTHER THAN CULTIVATION BY SEX AND CLASS OF WORKERS

FLY LEAF

This table, prepared in three parts, furnishes details relating to workers in household industry separately in Part-A, workers in non-household industry, trade, business, profession or service in Part-B and in Part-C the figures relating to both these two classifications have been presented in greater detail. The indusfries have been classified according to 'Standard Industrial Classification' and coded with a three digit system, the first digit representing the Division, the second the Major Group, and the third the Minor Group. There are nine Divisions, 45 Major Groups and 343 Minor Groups. The 'Standard Industrial Classification' scheme is presented as Appendix to this Table. In Part-A the figures relating to the workers in household industry only have been furnished for each branch of industry with the code numbers of Division and Major Group. The data have been presented also according to the status or class of worker. The term 'status of worker' denotes the position of worker *viz.*, whether one is an employer or employee, etc. In Part-A, the figures for employees and others have been given separately. An employee is a person who usually works under any other person for salary or wages. Even the unpaid worker in a household industry is treated as an employee, if he does not belong to the household which conducts the household industry. Apprentices who do not belong to the household are also treated as employees.

In Part-B, the data relating to the category of workers III and V to IX have been presented n ot only for employee but also for employer. An employer is one who employs others for wages or salary to get any work done and thereby responsible not only for his own work but also for the work of persons working under him. However, neither a person who employs domestic servant for household duties, nor a person who is himself employed by someone and employs others is treated as an employer. A single worker works by himself neither employing any one nor being employed under anyone except casually. But the head of the household in a household industry is not treated as a single worker. Each member of a co-operative society will also come under the category of single worker. One who works in any business or trade conducted mainly by the members of the family, ordinarily at least for an hour a day during the working season without receiving any salary in cash or kind, is a family worker. However, it will not include the members of the household who help in performing mere household duties.

In Part-C, data have been presented for Minor Groups also in addition to the Division and Major Group of industrial code. However, in this Part the data have not been presented according to the status or class of worker. In all the three parts the figures relating to total and urban areas only have been given. As entire Madras City is Urban, the figures for total and urban are the same.

TABLE B –VII—PARTS—A & B
PRINCIPAL WORK CLASSIFIED BY SEX AND SECONDARY WORK

FLY LEAF

This table prepared in two parts presents the cross-tabulated data of persons having primary and subsidiary work. The work on which a person spends most of his working time irrespective of the income he derives from it, has been treated as principal work and the workers have been divided into industrial categories also only on the basis of the primary work. In the case of persons having two occupations, the work other than the primary occupation is the subsidiary work and in the case of persons having more than two occupations the secondary work also was decided on the basis of the time spent in a subsidiary work among the other subsidiary works.

In Part-A, data of persons whose principal and secondary work are any two of the following—(1) cultivation, (2) agricultural labour, (3) household industry--have been given and in Part-B, data of persons with primary occupation in non-household industry, trade, business, profession or service and secondary occupation in household industry have been furnished. In Part-A the data have been presented by industrial Division and Major Group-wise for the principal work of household industry only whereas in Part-B, they have been presented in this manner both for the principal work and for the additional work of household industry.

TABLE B-VIII

PERSONS UNEMPLOYED AGED 15 AND ABOVE BY SEX AND EDUCATIONAL LEVELS

FLY LEAF

This table relates exclusively to non-workers, Part-A relating to urban areas and Part-B relating to rural areas. As already stated in Fly Leaf to Primary Census Abstract, the non-workers have been divided into 8 groups out of which data relating to two groups only, *viz.*, "never employed persons" and "unemployed persons", have been presented in this table. In Part-A, only data for each of these two groups have been given separately. Further, in Part-A, information has been furnished age group wise also. Never employed persons have been divided into five broad age groups *viz.*, 15-19, 20-24, 25-29, 30-34 and 35+ and the unemployed persons into six age groups *viz.*, 15-19, 20-24, 25-34, 35-44, 45-59 and 60+. Persons who seek jobs for the first time are termed as never employed persons and persons who have been once employed and now out of employment and are in search of jobs are treated as unemployed persons. In both the parts, the data have been classified according to the educational levels also, the educational levels adopted being the same as those in Table B-III Parts-A and B, respectively. As Madras City is entirely an urban area only Part-A has been prepared for Madras.

TABLE B-IX

PERSONS NOT AT WORK CLASSIFIED BY SEX, BROAD AGE GROUPS AND TYPE OF ACTIVITY

FLY LEAF

This table presents non-workers classified into all the eight groups. Data have been furnished separately for males and females and for total, rural and urban areas. The data have been further classified by broad age groups of 0-14, 15-34, 35-59 and 60+. Full-time students who do not attend to any work like household industry or help the family workers in any productive work belong to the first group of non-workers *viz.*, 'Full-time students'. Persons engaged in unpaid household duties and housewives and adult women who do not do any productive work or participate in family cultivation, household industry etc., constitute the second group of non-workers classified under the heading 'Household duties'. The dependants, infants and disabled persons constitute the third group of non-workers. Any person who depends on others for his clothing, food and shelter including an infant or a child not attending school and persons permanently disabled from work because of illness, accident or old age are included in this group. But this group does not include unemployed persons who are in search of employment. The fourth group of non-workers namely, 'retireed, rentiers or independent means' includes persons living on agricultural/non-agricultural royalty, rent or dividend. Beggar, vagrant or independent women who cannot indicate any source of income and others who have no specified source of existence come under the fifth group of non-workers. The sixth classification of non-workers *viz.*, 'Inmates of Institutions' includes convicts in jails undergoing sentence, patients in mental institutions and other health institutions and inmates of charitable institutions. An under-trial prisoner will not be classified as non-worker, if he has been doing any work before his arrest, and even if he is a non-worker before his arrest, he will be classified only under the broad group of non-workers to which he will belong before his arrest and will not be included under the group of inmates of institutions. The persons seeking employment for the first time and the persons unemployed but seeking work who form the seventh and eighth group of non-workers have already been defined in the Fly Leaf to Table B-VIII.

HOUSEHOLD ECONOMIC TABLES

B-SERIES

(B X to B XVII)

PRELIMINARY NOTE ON HOUSEHOLD ECONOMIC TABLES

These tables are based on the household schedule, a new document introduced in 1961. The data collected relate to the extent of land under cultivation, nature of work in household industry and the number of persons who are employed therein as family workers or as hired workers. Eight Household Economic Tables (B-X to B-XVII) have been prepared on the basis of a 20% sample of these households for all areas. The total number of sample households for the State is 1,448,862. Institutions have been excluded in the selection of samples. The total number of households including institutions in Madras District number 350,043. They are presented in this section.

In general, household economic tables deal with chief economic activities of households, *i.e.*, in the twin fields of cultivation and household industry. Of the eight household economic tables, the first table (B-X) is a summary table which distributes sample households into those (1) engaged neither in cultivation nor in household industry, (2) engaged either in cultivation or household industry but not in both and (3) engaged both in cultivation and household industry. The tables B-XI, B-XII, B-XV and B-XVII give a detailed account of households with reference to their size, size of holdings cultivated, interest in land and input of family and attached hired labour. They in general deal with cultivating households. Tables B-XIV (Parts A and B) and B-XVI are more concerned with the working of the household industry and try to explain its connection with cultivation. Table B-XIII acts as a link between the tables on cultivation and those on household industry.

The three important concepts that are necessary to understand these tables are explained below:

Household:

A household is defined as a group of persons who commonly live together and take their meals in a common mess unless the exigencies of work prevent any of them from doing so.

Household cultivation:

The households cultivating land have been covered under this classification. It includes ploughing, sowing and harvesting and does not include the growing or keeping of orchards or groves or working in plantations like tea, coffee, rubber, cinchona or any other medicinal herb or plant.

A person is said to be a cultivator if he or she is engaged as an employer, single worker or family worker in cultivation of land or supervision or direction of cultivation of land owned or held from Government or land held from private persons or institutions for payment in money, kind or share in the produce of crop. It is not necessary for the person to own the land cultivated.

Household Industry:

Household industry is a new concept introduced in 1961 Census and is defined as an industry conducted by the head of the household and/or by the members of the household at home or within the village in rural areas and at home in urban areas. Though it can use power, it should not be run on the lines of a factory and its workers should consist mostly of household members, hired workers playing a minor role only. Household industries should relate to production, processing, servicing, repairing or making and selling of goods and should not be restricted to the processes of buying and selling alone.

The average number of persons per household in Madras City is 4·8 which is slightly higher than the State average of 4·6 and State urban average of 4·7.

Madras City is taken as a separate district and there are no rural areas in this district. Since Madras City is entirely an urban area, 980 out of every 1,000 households are engaged neither in cultivation nor in household industry and this proportion is higher than that of State for total as well as urban areas (489 and 831 respectively). There is only one household in the City which is engaged both in cultivation and household industry. The households engaged in household industry only form 19 out of 1,000 households.

Among the cultivating households in Madras City 64·3% cultivate their own lands. 21·4% of the cultivating households still cultivate 8·0% of the total cultivated area under pure tenancy and 14·0% of the land are under mixed tenancy.

More than one-third of the cultivating households hold land in 2·5—4·9 acre size class which is the highest proportion among the cultivating households in Madras City.

The percentage of family workers employed in cultivation only in the City (1·17) is less than that of State (2·20) whereas the proportion of hired workers employed (6·44) is more than that of the State (1·87%).

The household industries that account for the major proportion of the workers engaged in household industry in Madras City are manufacture of cotton textiles and manufacture of tobacco products. Single member households form the major proportion among the households engaged in household industry.

TABLE B-XI

SAMPLE HOUSEHOLDS ENGAGED IN CULTIVATION CLASSIFIED BY INTEREST IN LAND AND SIZE OF LAND CULTIVATED

FLY LEAF

This table presents data of sample households engaged in cultivation classified by interest in land and size of land cultivated. Figures are given for the City as a whole.

The interest in land is divided as follows:

(i) Owned or held from Government

(ii) Held from Private persons or Institutions for payment in money, kind or share

(iii) Partly held from Government and partly from private persons for payment in money, kind or share.

Category I includes the total number of land holdings owned or held by virtue of possession as owner, *viz*; land held directly from Government under a grant, lease or assignment with rights of permanent. heritable and transferable possession or with rights of permanent, heritable possession but without the right of transfer or temporary or conditional leases of any kind entered into with the Government, Encroachment of Government land is treated as land held from Government and is classified under Category I.

Category II includes land taken from private persons or institutions for payment in money, kind or share with right of permanent heritable and transferable possession, with right of permanent heritable possession but without the right of transfer and those held under various tenancies or tenures which may be broadly classified as follows :—

(i) Tenants holding land with permanent and heritable rights whose land cannot be resumed by the owner on grounds of personal cultivation. (Such tenants may have the rights of transfer also in certain cases).

(ii) Tenants who have been given permanent rights subject to the right of resumption by the owner. (In some cases, the tenant has the right to acquire ownership. In other cases, he does not possess this right).

(iii) Tenants holding land in areas where in terim measures have been enacted for the stay of ejectment or for continuing the leases for a specified period.

(iv) Tenants holding land under temporary leases who are liable to ejectment.

(v) Areas held on condition of rendering service either to a village, community or to the Government as in the case of service inams. (This also includes cases where labourers working on plantations are given bits of land for personal cultivation with permanent rights).

(vi) All lands taken for a fixed amount of money or a fixed amount of produce or for a share of the produce or for which money is paid, partly in kind and partly in the shape of cash and land held free of consideration.

Category III: If the household had land cultivated under both the above two categories, it is classified under Category III.

The holdings are grouped into 10 sizes in acres as follows, *viz*;—

TABLE B-XII

SAMPLE HOUSEHOLDS ENGAGED IN CULTIVATION ONLY CLASSIFIED BY SIZE OF LAND CULTIVATED AND NUMBER OF FAMILY WORKERS AND HIRED WORKERS

FLY LEAF

This table presents data of households engaged in cultivation only, classified by size of land cultivated and number of family workers and hired workers. Households classified by size of holdings are cross-tabulated with reference to the number of persons working in cultivation. The figures are shown only for the City as a whole.

The size of the holdings adopted are same as in Table B-XI.

The number of persons working is grouped under six groups *viz.*, 1, 2, 3-5, 6-10, more than 10 persons and unspecified. Under each group, family workers and hired workers are shown separately.

Family workers in household cultivation refer to those members of the household who are engaged in cultivation by having some direct part in cultivation or in direction or supervision of cultivation. They need not necessarily do any manual labour. But absentee landlords are excluded.

Hired workers refer to workers other than family members who were engaged in whole-time employment and who worked during the last cultivation season or during the current cultivation season.

Similar data on households engaged in Household Industry are presented in Table B-XV.

TABLE B-XIII

SAMPLE HOUSEHOLDS ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY SHOWING SIZE OF LAND CULTIVATED CLASSIFIED BY PRINCIPAL HOUSEHOLD INDUSTRY

FLY LEAF

This table presents households engaged both in cultivation and household industry. It shows the size of land cultivated by these households classified by principal household industry.

The size of land given in columns 4-13 is the same as adopted in Tables B-XI and B-XII.

Principal household industry is that industry which is conducted for a greater number of months by the household. Provision was made in the Household Schedule to record more than one household industry if practised by the household, but only principal household industry has been tabulated. For definition of household industry, the preliminary note may be referred.

The principal household industry in Col. 2 is classified on the basis of Indian Standard Industrial Classification and is presented for Division and Major Group only. Household industry is covered under Divisions 0-3. For detailed description of the code numbers of the Divisions, Major and Minor Groups refer Appendix to B-IV Table.

FLY LEAF

This table presents households engaged only in household industry. It is prepared in two parts. Part-A shows the households classified by nature of principal household industry and the number of persons engaged. The classification of the industry has been done with reference to the Indian Standard Industrial Classification and presented for Division and Major Group. In Part-B, the data are presented for each Minor Group.

A person engaged in household industry is regarded as a worker only if he has some regular work for more than an hour per day. The number of persons engaged are grouped as 1, 2, 3-5, 6-10, more than 10 and unspecified as in Table B-XII. For definition of household industry, please see the Preliminary note.

Figures for workers in household industry can be found in the following tables based on the Individual Slips: B-I, B-II, B-III Part-A, B-IV, B-V, B-VII Part-A and Part—B.

TABLE B-XV

SAMPLE HOUSEHOLDS ENGAGED BOTH IN CULTIVATION AND HOUSEHOLD INDUSTRY CLASSIFIED BY SIZE OF LAND

FLY LEAF

This table presents households engaged both in cultivation and household industry similar to that of Table B-XIII. Table B-XIII gives a cross tabulation between the size of the holding and the nature of household industry in which the household is engaged as subsidiary to cultivation. In this table, the data are further analysed and given by a cross tabulation of the size of the holding with reference to the persons working in these households.

The sizes of the holdings are the same as adopted in Tables B-XI, B-XII and B-XIII.

In columns 6 to 28 of this table, cultivating households engaged in household industry are tabulated against the number of persons working in the households.* The number of persons are grouped as adopted in Tables B-XII and B-XIV Part-A. In cases where more than one person are employed, for each group the number of family workers with sex break up and hired workers are shown. Columns 6 to 28 have been consolidated and shown in Columns 2 to 5.

Similar data in respect of households engaged in cultivation only are presented in Table B-XII.

TABLE B-XVI

SAMPLE PRINCIPAL HOUSEHOLD INDUSTRY CLASSIFIED BY PERIOD OF WORKING AND TOTAL NUMBER OF WORKERS ENGAGED IN HOUSEHOLD INDUSTRY IN ALL AREAS

FLY LEAF

This table presents households engaged in household industry only or both in household industry and cultivation. It presents data of the principal household industry of these households classified by the period of working and total number of workers.

Data on households engaged in household industry with cultivation and without cultivation are shown separately.

Principal household industries are classified and presented for Division and Major Group under the Indian Standard Industrial Classification. For the detailed description of Codes, please refer appendix to Table B-IV.

Columns 8 to 27 divide industries with reference to period of working and number of workers. Period of working is grouped as 1-3 months, 4-6 months, 7-9 months, 10 months to one year and months not stated. Under each group, number of households, number of family workers with sex break up and hired workers are shown. It is further consolidated and shown in Columns 4 to 7.

This table generally corresponds to C-I table of 1951 Census. In 1951, C-I table presented data on "Size and Composition" of households. Information on participation in cultivation and household industry etc. was not then collected. In 1961, two separate tables have been designed, one for the 'Size' and another for 'Composition'. Table on the size of the household is presented under B series as Household Economic Tables and the other presented in C Series (Cultural Tables).

Table B-XVII presents data on sample households classified by size and participation in household cultivation or industry or neither of them. As regards rural areas for households engaged in cultivation, separate particulars are given for each size of holding, but for urban they are not presented separately. As the entire Madras City is an urban area, the columns relating to rural have not been shown. The grouping of holdings is the same as in previous tables (*i.e.*) B-XI, B-XII, B-XIII and B-XV.

The family size is divided as family with one member (*i.e.*) single member household, 2-3 members, 4-6 members, 7-9 members and 10 members and over. The size adopted in 1951 differs from what is followed now; the size being

small (*i.e*) 3 members or less,
medium (*i.e*) 4-6 members,
large (*i.e*) 7-9 members and
very large (*i.e*) 10 members and over.

No change has been made in the composition of medium, large and very large families.

Census household refers to a group of persons who commonly live together and take their meals in a common mess unless the exigencies of work prevent any of them from doing so. There is a slight distinction between a family and Census household. The household includes persons who are not members of the family, but are residing with the family during the Census period.

In a separate Appendix the total number of households and total household population are given sex-wise.

Total number of households shown in Column 2 of the Appendix includes institutions. Institutions refer to penal, charitable or mental institutions, hotels, hostels, hospitals, boarding houses, etc. and were excluded from the selection of sample households.

Total household population shown in Columns 3 to 5 of the Appendix excludes institutional and houseless population.

CULTURAL TABLES

(C-SERIES)

PRELIMINARY NOTES ON C—SERIES

Table C-II

This furnishes data on the marital status of persons by age groups of 0-9, and quinquennial age groups from 10-14 onwards to 65-69 and for 70 and above in a consolidated form.

The following table shows the distribution of 1,000 persons by marital status in Madras City.

Marital status	Persons	Males	Females
Never Married	519	583	449
Married	414	394	436
Widowed	64	21	110
Divorced or Separated	3	2	5
Unspecified	...	...	...

In Madras City 58% of males and 45% females are never married. The proportion is high because in the 0-14 age group, males and females form 35% of total males and 38% of total females.

Even among divorced or separated, State has recorded a little more than Madras City.

The marital status of the population of City and State compare as follows :

Marital status	Madras State			Madras City		
	P	M	F	P	M	F
Never Married	494	554	433	519	583	449
Married	420	410	430	414	394	436
Widowed	79	32	128	64	21	110
Divorced or Separated	7	4	9	3	2	5
Unspecified	...	...	...	...	...	...

Madras City has recorded a higher proportion than State among persons, males and females in the category of never married. Among married, City has recorded a higher proportion only in the case of females.

Distribution of 1,000 married persons by broad age groups in each sex in the three Censuses of 1941, 1951 and 1961 for Madras City is shown below :—

Year	0—14		15—34		35—54		55 & above	
	M	F	M	F	M	F	M	F
1961	...	3	371	685	507	281	122	31
1951	13	8	488	618	382	295	116	79
1941	2	32	430	692	468	255	100	21

This reveals that child marriage has become almost extinct.

Table C-III

From this table which deals with the educational classification of persons by age group, it is seen that the proportions of male and female literates in Madras City work out to 696 per 1,000 and 482 per 1,000 respectively. The number of illiterates and literates per 1,000 males and females in each age group is given below :—

Age group	Illiterate		Literate	
	Males	Females	Males	Females
All ages	304	518	696	482
0 - 4	1,000	1,000	...	...
5 - 9	304	366	696	634
10 - 14	104	206	896	794
15 - 19	137	314	863	686
20 - 24	139	401	861	599
25 - 29	176	477	824	523
30 - 34	193	504	807	496
35 - 44	230	570	770	430
45 - 59	263	632	737	368
60 & above	293	695	707	305
Age not stated	663	736	337	264

Age groups between 10-14 to 30-34 have recorded comparatively less proportion of illiterates than the other higher age groups above 35-44 and this indicates the spread of literacy in the recent years. The proportion of female illiterates is greater than that of the males in all the age groups.

Among literates, age group 10-14 has recorded the maximum proportion of 896 for males and 794 for females and this again testifies to the spread of literacy in recent years. The proportion of illiterates in the State is more than that of the City for both the sexes.

Distribution of 1,000 males and females among age groups above 5 years according to the educational classification is as follows in the City :

Literacy rates among the industrial categories:

The proportion of illiterates is found to be the highest in the category of Mining, Quarrying, etc. The maximum proportion of workers among the mere literates is found in the categories of Cultivators and Agricultural labourers. The category in which the maximum proportion is found under Primary or Junior Basic is Manufacturing where there are 358 persons per 1,000. The maximum proportion of workers among the Matriculation or Higher Secondary group is in Transport with 267 per 1,000 and in Trade and Commerce, there are 224 per 1,000. Other Services has recorded the maximum proportion of graduates among the workers. It has recorded as much as 57 per 1,000. The other two categories which have recorded more than the total average are Trade and Commerce and Transport with 47 and 41 per 1,000 respectively. The maximum proportion of persons among the Technical degree holders is recorded in Construction and Other Services.

Distribution of 1,000 non-workers among the various educational standard are as follows:—

Educational Standard	No. of persons per 1,000 non-workers
Illiterate ...	471
Literate (without educational standard) ...	249
Primary or Junior Basic ...	215
Matriculation or Higher Secondary ...	54
Technical diploma not equal to degree ...	1
Non-technical diploma not equal to Degree ...	...
University Degree or Post-Graduate Degree other than technical Degree	8
Technical Degree or diploma equal to Degree or Post-Graduate Degree ...	2

Among non-workers, illiterates have the maximum proportion, being 471 illiterate persons per 1,000 non-workers. Literates who have no educational standard are 249 per 1,000. University degree or Post-Graduate degree holders form only 8 per 1,000.

Table C-V

The particulars about the languages spoken by the population can be known from this table. Though in the City 98 languages have been returned as mother-tongue, only five languages namely English, Malayalam, Tamil, Telugu and Urdu have recorded more than 1% of the total population.

The distribution of 1,000 of the population speaking the more important languages in City is given in the statement below :

Mother-tongue spoken		No. of persons per 1,000
Tamil	...	709
Telugu	...	141
Urdu	...	59
Malayalam	...	34
English	...	10
Hindi	...	9
Kannada	...	9
Marathi	...	8
Gujarathi	...	7
Other languages	...	14

709 per 1,000 persons in Madras City have Tamil as their mother-tongue. The next highest, 141 per 1,000 have returned Telugu as their mother-tongue. Malayalam has been returned as mother-tongue by 34 per 1,000 persons and English as mother-tongue by 10 per 1,000 persons.

Distribution of 1,000 persons speaking the more important languages in City and State is given below :

Mother-tongue		State	City
Tamil	...	832	709
Telugu	...	100	141
Urdu	...	18	59
Malayalam	...	12	34
English	...	...	10
Other mother-tongues		38	47

It can be seen from the above statement that those who have Tamil as their mother-tongue are less in City than in State and persons having languages such as Telugu, Urdu, Malayalam, English and all other languages have recorded a higher proportion in City than in State. This indicates the cosmopolitan nature of the City.

Table C-VII

It is known from this table which throws light on the religious composition of City's population, that about 85% of the total population in City are Hindus. Muslims form 7·5% and Christians 6·9% of the total. The percentages of all other religions work out to less than one per cent of the total population in City.

No. of persons per 1,000 in the districts of the State in Hindu, Christian and Muslim religions are given below:

District	Hindus	Christians	Muslims
STATE	900	52	46
Madras	850	69	75
Chingleput	950	26	22
North Arcot	912	22	63

Thanjavur	896	37	63
Ramanathapuram	881	54	65
Tirunelveli	814	119	67
Kanyakumari	589	369	42

The highest proportion of 962 per 1,000 Hindus is recorded in Salem district and lowest proportion of 589 per 1,000 in Kanyakumari. Madras City, Nilgiris, Thanjavur, Ramanathapuram, Tirunelveli and Kanyakumari districts have recorded less than the State average of 900 per 1,000 Hindus.

Kanyakumari with 369 Christians per 1,000 has recorded the maximum. Tirunelveli, Nilgiris, Madras, Tiruchirapalli and Ramanathupuram are the other districts which have recorded more than the State average of 52 Christians per 1,000. Salem district has recorded the least proportion of Christians. Nilgiris with 82 per 1,000 persons has recorded the maximum proportion among Muslims.

Table C-VIII—Part—A

From this table which furnishes the number of scheduled castes by each Industrial classification of worker, non-worker and also illiterates and total literates in each sex, it can be seen that in City there are 214,103 scheduled castes forming 12·4% of the total population. The sex ratio of scheduled castes works out to 936 females per 1,000 males.

The following statement will indicate the total population and also the sex ratio of scheduled castes in both Madras State and Madras City .

District	Total scheduled caste population			Proportion per 1,000 total population			No. of females per 1,000 males among scheduled castes
	P	M	F	P	M	F	
STATE ...	6,067,327	3,044,822	3,022,505	180	180	180	993
Madras City ...	214,103	110,588	103,515	124	122	126	936

Madras City has recorded a lower proportion of scheduled caste population than Madras State. Among scheduled castes 60.3% of the population in City are illiterates. Among males 47.5% are illiterates and among females illiterates form 74%. The proportion of illiterates in Madras State among scheduled castes is as much as 853 per 1,000 persons.

Proportion of illiterates and literates per 1,000 total scheduled caste population in Madras City and State are as follows:—

	Total Population	Males		Females	
		Illiterate	Literate	Illiterate	Literate
STATE	1,000	384	118	470	28
City	1,000	245	271	358	125

Out of the total population of 214,103 scheduled caste persons, 65,233 or 31% are workers. Male workers form 52% of the total male and female workers form 8% of the total female scheduled caste population.

Table C-VIII—Part-B

From this table which deals with similar information as C-VIII-Part-A relating to scheduled tribe, it can be seen that in City, there are 1,396 scheduled tribe persons out of which 674 are males and 722 are females. Sex ratio of scheduled tribe population works out to 1,071 females per 1,000 males.

Area	Total scheduled tribe population			Proportion per 1,000 total population			No. of females per 1,000 males
	P	M	F	P	M	F	
STATE	251,991	129,185	122,806	7	8	7	951
City	1,396	674	722	1	1	1	1,071

The proportion of scheduled tribe persons in Madras City is less than the proportion in Madras State. The proportions of males and females are same in City being one per 1,000 each, whereas in State, the proportion of males is greater than that of females. State has 951 females per 1,000 males, but in Madras City the number of scheduled tribe females are more than males with a ratio of 1,071 females per 1,000 males. 59% of scheduled tribes are illiterates in City. Illiterates among scheduled tribe males form 41% whereas among females it is as high as 76%.

Illiterates in Madras City among scheduled tribes are 590 per 1,000 persons whereas in Madras State, illiterates are as high as 941 per 1,000.

Proportion of literates and higher educated persons among scheduled tribes is found to be more in Madras City than in Madras State. In City, there are 410 per 1,000 literates whereas in the State there are only 59 per 1,000 literates. Male literates in State are 89 per 1,000 whereas in City there are 595 per 1,000 male literates. Among females, City has recorded 237 per 1,000 while in State, only 27 per 1,000 has been recorded.

Out of the total population of 1,396 scheduled tribes in City 572 persons or 41% are workers. Male workers constitute 63% of the male population and female workers constitute 20% of the female population. The proportions of workers in both the sexes are less in Madras City than the proportions of the State.

TABLE C-1

FAMILY COMPOSITION OF SAMPLE HOUSEHOLDS

FLY LEAF

This deals with the family composition of sample households and has been prepared on a 20% sample. This gives the total population of sample households, number of heads of households, number of spouses of heads of households, married relations and other persons. Data on the family composition of the households are given for rural and urban areas separately. Such data were presented for the first time in 1951. The table presented in 1961 however, is based on a larger sample than the table in 1951 when the table was based on a sample of one in every 1,000 households.

TABLE C-II

AGE AND MARITAL STATUS

FLY LEAF

This deals with the marital status of the various age groups and gives separate figures for rural and urban areas of each district. The population is classified in each age group under four categories—Never Married, Married, Widowed and Divorced or Separated. A fifth category with marital status not specified will be found in the table. Marital status has been given for 15 different age groups: 5 year age groups from 10 to 69, 0-9 and 70+ or over 70. Figures for 'Age not stated' have also been furnished. The table will help us in discussing the pattern of marriage age in the population and its variation from 1951. It represents a definite improvement on the corresponding table of 1951. Firstly this has been prepared on a complete count while in 1951 the table was prepared on 10% sample. More detailed age groups have also been adopted for tabulation. In 1941, due to war, this table was not prepared. In 1931 and earlier years, religion was the basis for tabulation and age and marital status of various religious groups were shown separately. In 1951, tabulation was made on the basis of livelihood classes and in 1961, the tabulation has been done on the basis of industrial categories, though figures for each livelihood class or industrial category are not published. In the 1961 Census, the Economic Table B-II gives the distribution of towns in each industrial category and the non-workers according to the four broad age groups: 0-14, 15-34, 35-59, 60 and over. This table is published in Part II-B. Another improvement effected in 1961 is that the table presents separate figures for divorced and separated people. In 1951 Census, divorced and separated were clubbed with the widowed people in the table but separate figures were given in an appendix

TABLE C-III

AGE, SEX AND EDUCATION IN URBAN AND RURAL AREAS

FLY LEAF

This deals with the educational standards of the population classified by sex and age groups. This has three Parts—Part-A giving the educational standards and age groups of the total population, Part-B dealing with educational standards of urban population and Part-C of the rural population. 10 age groups have been adopted for all the three tables—5 year age groups upto 34, 35-44, 45-59 and 60+. In Part-B, dealing with the urban population, educational standards adopted for classification are different from C-III—Part-A dealing with the total population and C-III—Part-C dealing with the rural population. In C-III—Parts-A and C people have been classified as literates and illiterates which in turn have been subdivided into :

Literates (without educational standards)

Primary or Junior Basic and

Matriculation and above.

But in Table C-III—Part B, a more detailed classification of educational standards have been adopted. The literates have been classified by the following 7 educational standards.

1. Literates (without educational standards)
2. Primary or Junior Basic
3. Matriculation or higher secondary
4. Technical diploma not equal to degree
5. Non-technical diploma not equal to degree
6. University degree or post-graduate degree other than the technical degree
7. Technical degree or diploma equal to degree or post-graduate degree

The last category dealing with the technical degrees and diplomas equal to degree have been further divided into 7 sub-divisions, *viz.*, engineering, medicine, agriculture, veterinary and dairying, technology, teaching and others. The table thus gives useful information about the educational levels of the urban population which will help us in assessing the progress of higher and technical education. As the percentage of such persons will be small in the rural sector, such a detailed classification has not been attempted.

These tables represent a definite improvement over the corresponding tables of earlier Censuses. Firstly, the literates in the various age groups have been cross tabulated according to various educational standards for the first time in Census history Actually, particulars of educational standards were collected from 1941 onwards. Again this table is based on a full count while in 1951 it was prepared on the basis of 10% sample. In 1931 and earlier Censuses, people were classified only as literates and illiterates and further classification of literates was not attempted. Literacy in English was an item of information collected upto 1931, but discontinued thereafter. In the first three Censuses people were actually classified into three categories, literates, illiterates and people under instruction. This classification was replaced by a two-fold classification of literates and illiterates from 1901 onwards. In 1941, data were collected about the partial literates, i.e., people who can only read. This practice was modified in the subsequent Censuses and only people who knew both to read and write were considered as literates. The partial literates of 1941 were treated as illiterates in 1951 and 1961.

TABLE C-V
MOTHER-TONGUE
FLY LEAF

This presents the number of speakers of each language with sex break up. It gives the strength of various linguistic groups in each district separately for rural and urban areas. The languages returned are shown in alphabetical order. In the earlier Censuses, the data on language or mother-tongue were presented on territorial basis. Till 1941, the following broad classifications were adopted :

(1) Languages of Madras Presidency

(2) Other Indian languages

(3) Non-Indian Asiatic languages

(4) Non-Asiatic languages.

In some Censuses, European languages were shown separately. In 1951, this scheme was replaced by a three-fold classification :

(1) Languages of the Indian Sub-Continent

(2) Languages of other Asian Countries

(3) Languages of Continents other than Asia.

When an enumerator could not make out the language spoken by any Tribe, it was grouped under the classification 'Tribal languages'. A more scientific attempt has been made to classify the languages in 1961 Census.

TABLE C-VII
RELIGION
FLY LEAF

This presents the principal religions by locality and sex break up. This corresponds to Table D-II of the 1951 Census in all details. Prior to 1951, the population was classified according to religion down to the village level and other characteristics like marital status and education were also classified on the basis of religion. This religion was the unit of tabulation till 1931. In 1951 livelihood classes and in 1961 the industrial categories of workers have been adopted as units of tabulation. Prior to 1931, other ethnographical details, the sect of religion, the race and caste particulars were collected during enumeration and tables on religion presented the sect and caste particulars under each religion. Later the questions on sect of religion, race and caste were dropped. From 1951 onwards only the main religion is presented in the tables. As in 1951 Census, the present table provides two residuary columns for indefinite beliefs and religion not stated. There is another improvement over 1951, in that the figures have been presented for rural and urban areas of each district separately.

TABLE C-VIII

CLASSIFICATION BY LITERACY AND INDUSTRIAL CATEGORY OF WORKERS AND NON-WORKERS AMONG SCHEDULED CASTES AND SCHEDULED TRIBES

FLY LEAF

This table has two parts—Part-A dealing with Scheduled Castes and Part-B dealing with the Scheduled Tribes. These tables give the distribution according to the industrial categories of workers and non-workers classified on the basis of their educational standards. These tables, however, present only the total population of all Scheduled Castes in Part-A and that of the Scheduled Tribes in Part-B. Special tables on each Scheduled Caste and Tribe are presented in Part V of our publications and they give detailed particulars on each caste or tribe. Thus this table only presents an abstract of the data presented in Part V. Though in earlier Censuses tables were presented for important communities and other special groups, in this Census only Scheduled Castes and Scheduled Tribes have been classified and all other groups are excluded. In this table, various categories of workers and non-workers have been classified either as literates or illiterates, without adopting the detailed educational standards used in Table C-III.

SPECIAL TABLES FOR SCHEDULED CASTES AND TRIBES

(SCT, SC AND ST SERIES)

TABLE SCT-I—PARTS—A & B

INDUSTRIAL CLASSIFICATION OF PERSONS AT WORK AND NON-WORKERS BY SEX FOR SCHEDULED CASTES AND SCHEDULED TRIBES

FLY LEAF

This table presents the total number of workers classified into nine industrial categories and non-workers (for each sex) for the scheduled castes and scheduled tribes in Madras City. Part-A of this table relates to scheduled castes and Part-B to scheduled tribes. Each of these parts is in two sections, one for rural and another for urban areas. As Madras district is entirely an urban area, only the section relating to urban is given in this volume.

SCT—I-Part-A :

The total number of scheduled castes in the State according to the President's list is 79. In Madras City, however, 29 scheduled castes have been returned in this Census. The persons who have been returned under the generic names of scheduled castes and Harijans have been grouped and shown as 'Unclassified'. The number of workers in the two special occupations "Tanning and Currying of hides and skins" and "Scavenging" for each scheduled caste has also been given in columns 28 to 31.

SCT-I—Part-B :

According to the President's List, the number of scheduled tribes in the State is 42. In Madras City, 7 tribes have been returned in this Census. The persons who have been returned under the generic names of scheduled tribes, Adivasis, etc., have been grouped and shown as "Unclassified".

TABLE SCT II—PARTS-A & B
AGE AND MARITAL STATUS FOR SCHEDULED CASTES AND SCHEDULED TRIBES

FLY LEAF

This table furnishes the marital status for scheduled castes and scheduled tribes by broad age groups. Part-A relates to scheduled castes and Part-B to scheduled tribes. For the age group 0 to 14, 15 to 44, 45 and above, age not stated and for the total population, the number of persons of each sex coming under the categories "Never Married", "Married", "Widowed", "Divorced/Separated" and "Unspecified status" has been given. This table also furnishes the number of males and females in each of these three age groups. The table has not been prepared separately for rural and urban areas.

As per Census definition, age refers to the number of completed years of age, (*i.e.*) the age on the last birth day before 1st March 1961. "Never Married" refers to a person who has not at any time entered into the state of matrimony. A person is regarded as "Married" if he is recognised by custom or society to be a married person or has been married in accordance with any religious rites or by registration or according to any custom or form of marriage recognised by his community or is in stable *de facto* union and has not been widowed or divorced. A person is regarded as widowed if he or she has lost his or her spouse by death but has not remarried. A person is said to be divorced who after marital ties have been severred by law or custom, either social or religious or by mutual consent, has not been married again. A person who has been separated from wife or husband and is living apart with no intention of living together again is regarded as separated.

TABLE SCT-IV

RELIGION FOR SCHEDULED CASTES AND SCHEDULED TRIBES

FLY LEAF

This table gives the number of persons belonging to different religions among scheduled castes and scheduled tribes. Part-A of the table relates to scheduled castes and Part-B to scheduled tribes. Scheduled castes are found only among the Hindus and Sikhs. Among the scheduled castes, only 20 persons have been returned as belonging to Sikh religion in the whole State and none has been recorded in Madras district. Hence as all the scheduled castes in Madras district belong to the Hindu religion and as the caste-wise population is given in Table SCT I Part-A, Part-A for the Table SCT IV has not been prepared for Madras district.
