OFFICE OF THE SURGEON-GENERAL
WITH THE GOVERNMENT OF MADRAS,
Coimbatore, 15th July 1915.

No. 93/505.

From

THE HON. SURGN. GENL. W. B. BANNERMAN, C.S.I., K.H.P., M.D., D.S.C., I.M.S.,
Surgeon-General with the Government of Madras,

To

THE CHIEF SECRETARY TO GOVERNMENT,
PUBLIC DEPARTMENT.

SIR,

I have the honour to submit for the information of Government the annual returns of the Civil Hospitals and Dispensaries in the Presidency for the year 1914.

2. *Attendance.*—The severe epidemic of cholera which prevailed in various parts of the Presidency is adduced as the cause for the reduction in the numbers seeking relief at the institutions in the Kistna and Kurnool districts. The frequent changes in the *personnel* of the controlling officers, which the outbreak of war rendered necessary in the latter half of the year, led to a reduction in the number of serious operations, such as amputations, abdominal sections, etc. With these exceptions the numbers treated showed an increase.

3. *Number of institutions.*—The number of institutions affording relief rose from 684 to 688; the details are given in Statement A. One Local Fund and 4 private non-aided institutions for women and children were closed during the year. The statistics of the Venkataramana and the Sri Kanyaka Parameswari Devasthanam Ayurvedic Dispensaries, aided by the Madras Corporation, have been excluded as the patients are not treated according to the methods of Western medicine. The Kaliyani Hospital and the San Thomé Convent Dispensary, aided by the Madras Corporation, and the private institutions at Salur and Berhampur did not furnish detailed statistics for the year.

4. *State special institutions and Railway dispensaries.*—The State Special Institutions, comprising 44 for the Police and 13 for other departments, gave relief to 11,467 in and 68,840 out patients. The Railway dispensaries treated 85 in and 200,303 out patients. The details of disease are given in Statements D (i) and D (ii); malaria, rheumatism, dysentery, respiratory diseases and disorders of digestion were the commonest ailments. The totals treated in the above institutions were 21,660 and 21,912 respectively in excess of those for the preceding year.

5. *Private non-aided institutions.*—Two of the Private Non-aided Institutions were transferred to the aided list, and five others were closed. The remainder furnished statistics (Statement E) for 166,810 male and 166,641 female patients, a fall of over 4,000 males and 6,000 females among out-patients as compared with the last returns. The reduction occurred among out-patients only, for the record of cases requiring admission into hospital, notably labours, was good.

6. *State Public, Local Fund and Private-aided institutions, Classes I, III and IV.*—The public institutions have done good work during the year. The number of beds was increased by 62 for males and 65 for females. Of this number, only 75 per cent. of the beds for men and 63 per cent. of those for women were occupied throughout the year. So long as the hospitals are without a proper female nursing staff, beds for female patients will remain empty and those for men will not be so popular as they should be. I pointed this out in my last report. In the general hospitals were treated 78,695 in-patients; and 12,870 were

treated in the hospitals for women and children only. The total is thus 4,345 in excess of the preceding year. The percentage of sexes was 58·6 male and 35·6 female adults; with 5·8 children of both sexes. The daily average number in hospital comprised 2,496 men, 1,392 women and 237 children. Contrasted with the record of 1913 this shows a fall of 18 among males and an increase of 84 among females. In the city hospitals there was a decrease of 25 among males and an increase of 21 among females in the daily average.

7. *Result of treatment.*—Sixty per cent. were cured, 19 per cent. were relieved and 12½ per cent. were discharged otherwise. The ratio of mortality was 5·42 per cent. in the class A hospitals, 2·65 in the class B, and 5·03 on the total. The greatest mortality occurred among cases of cholera, dysentery, various disorders of digestion (including diarrhoea,) pneumonia and tubercle, malaria, kidney disease, and severe injury.

8. *Small-pox.*—One hundred and seventy-one persons suffering from small-pox were treated as in-patients; of which 134 were protected by vaccination, 2 by re-vaccination, 2 by previous attacks of small-pox and 33 were unprotected. The average stay in hospital was 17, 12, 9 and 19 days respectively. The mortality among the vaccinated was 14·18 and among the unprotected 51·51. No deaths occurred among the re-vaccinated and those protected by previous attacks of small-pox.

9. *Out-patients.*—The out-patients included 3,381,538 men, 1,475,391 women and 1,795,224 children; the total was 233,375 above that for the preceding year. The number "represented by friends" was 439,389. Among these were 32,225 out-door labour cases attended by medical officers or midwives at their homes, and 147,093 other adult females. The Hindu population furnished 73 per cent. of the former and over 60 per cent. of the latter group. The average daily attendance was 20,572 men, 9,823 women and 10,678 children; the total was an increase of over 2,000 on the figure of 1913.

10. In the city of Madras the attendance of out-patients *apparently* decreased by 23,478, but when it is pointed out that the figures (amounting to 45,433) for the two Ayurvedic dispensaries referred to in paragraph 3 *supra*, have been omitted, and that no return has been received from the Kalyani Hospital, which last year returned 2,867 attendances, it will be seen that there is really a large increase in the number of sick to whom relief was afforded by the Government institutions. The Institution showing the largest increase is the General Hospital with an increase in attendance of 9,619 over last year's figure. This is undoubtedly due to the remodelling of the arrangements for dealing with out-patients, whereby the sick can now be easily marshalled in orderly rows according to the disease they are suffering from, thus allowing of a larger number being seen and properly dealt with in a shorter time than formerly.

11. *Race distribution of those treated.*—The proportions contributed by the different races to the "total treated" showed no appreciable variation from past years. Each thousand was composed of 4 men, 4 women and 3 children of the Europeans and Anglo-Indians; 390 men, 158 women and 191 children of the Hindus; 62 men, 27 women and 37 children of the Muhammadans; and 54 men, 34 women and 36 children of the other classes.

12. *Disease prevalence.*—As regards the variety of disease dealt with there were marked increases under cholera, dysentery and diarrhoea. The prevalence of other diseases was in the same proportion as usual. There was an increase of nearly 16,000 under the head of injuries. *Labour cases* numbered 39,201 as contrasted with 37,865 in the preceding year; a considerable fall in the number seeking admission under this head at the Victoria Caste and Gosha Hospital was due no doubt to the change in the holder of the appointment of lady doctor and to the great popularity of the Government Maternity and the Sir Ramaswami Mudaliyar's Lying-in Hospitals, whose numbers were better than in the previous year.

13. *Operations.*—Nearly four per cent. of those seeking treatment needed operation. The number of operations performed on in-patients was 26,807 and 232,759 on out-patients. These were necessitated by injury in 44,889 instances.

Except in the graver operations, as already noted, the out-turn of surgical work showed an increase of 2 per cent. on the total of the previous year. Ninety-six per cent. were cured and three per cent. were relieved; the ratio of mortality was 0.24 per cent.; 0.27 represents the number discharged otherwise; 1,290 patients remained under treatment at the end of the year.

14. *Itinerating dispensaries.*—By means of "Itinerating dispensaries" sanctioned during the year for the first time relief was afforded to 13,124 patients in Gōdāvari, 786 in Kurnool, 1,016 in Vizagapatam and 1,932 in Chittoor districts. Most of these suffered from malaria and its consequences. This is natural, as these dispensaries were established for the purpose of treating malaria in the hill tracts of the presidency.

15. *Finance.*—Rs. 10,73,664 were spent on medical relief in the City of Madras. Of this amount the Government contributed Rs. 8,43,043, the Corporation gave Rs. 1,30,756 and the public subscribed Rs. 31,134, the balance accruing from Local Fund contributions and miscellaneous receipts. Twenty-nine per cent. of the expenditure was incurred for salaries; medicine and diet cost respectively 12 and 18 per cent.; 21 per cent. was spent on miscellaneous charges and 20 on buildings and repairs. Excluding the items of buildings and diets the cost per patient treated came to Rs. 1-14-0, and the average daily cost per diet for in-patients was As. 6-8.

16. The outlay on medical relief in the mufassal was Rs. 20,91,592. Of this sum Government contributed 15.6 per cent.; Municipalities 24.3 per cent.; Local Boards 54.6 per cent.; subscribers, European 1.7 per cent. and Indian 0.9 per cent. Receipts as interest on investments and miscellaneous items amounted to 0.82 per cent. and 2.68 per cent. respectively. The expenditure comprised the following items:—Salaries, Rs. 9,14,462; medicines, Rs. 4,63,024; diet, Rs. 1,66,460; miscellaneous charges, Rs. 1,68,345; buildings and repairs, Rs. 3,75,814; investments, Rs. 3,487. Excluding the cost of the last two items and that of diets the cost per patient treated was As. 3-10, and the average daily cost per diet was As. 2-7.

17. *House Surgeons and Physicians.*—In G.O. No. 104, Public, of 22nd January 1914, Government approved of the proposal to appoint a certain number of young graduates as House Surgeons and Physicians to the principal hospitals in Madras and the mufassal. The idea underlying the proposal was firstly the improvement of the education of the graduates that would result from the practical experience gained by working under the experienced officers in charge of the main hospitals; and secondly the knowledge of the character of the men that would be acquired which would enable a selection to be made of those deemed suitable for Government service. To some extent these results have been attained though some of the graduates have shown disappointingly little desire to improve their professional knowledge by the study of the abundant clinical material at their disposal. They, in many cases, appeared to regard the appointments of House Surgeon and Physician as a "means to an end," and that end the entering of Government service. Some little friction arose in a few cases, as to the relation of the newly fledged graduate to the experienced Government Medical Officer of many years' service, though of lower professional qualification. These initial difficulties will, it is hoped, be overcome in course of time, and these appointments will come to be regarded as things to be sought after, and not as unattractive posts to be held merely as stepping stones to Government service. At the end of 1914 there were 16 of these officers, in the Madras city hospitals, and 9 in mufassal hospitals.

18. *Diets.*—The expenditure on diets is steadily increasing owing to the rise in the price of food stuffs. The other columns of the financial statement call for no remarks.

19. *Independent charge of dispensaries.*—Forty-four third grade and twenty-three fourth grade Sub-Assistant Surgeons were in independent charge of dispensaries at the close of the year. The number could not be reduced owing to the strain on the department on account of the war.

20. *Medical libraries*.—The district lending libraries are well maintained. Inclusive of the opening balance the year's receipts amounted to Rs. 11,554-1-8. The number of books was increased by 565 at an outlay of Rs. 4,058. The members averaged 513, their subscriptions amounting to Rs. 1,169-0-6. The closing balance was Rs. 7,280-2-7.

21. *Inspections*.—Excepting Masulipatam and Cuddalore all the head-quarter stations and Civil Surgeon charges were inspected by me. Some of the institutions were not inspected by the District Medical Officers owing to the annual programme being upset by the recent changes. Stock and service books were duly verified at the stations inspected.

22. *Effect of the war*.—Up to the 31st of December 1914, the number of I.M.S. officers in Civil employ in the Madras Presidency who had been recalled to Military duty was 41, including in this number officers of the Bacteriological Department lent by the Government of India. Outside the Presidency town there were on that date only five appointments held by I.M.S. officers, viz., the Civil Surgeoncy of Coonoor, and the charge of the districts of Gōdāvari, Nilgiris, Vizagapatam and Tanjore, all other appointments being held by Civil Assistant Surgeons.

23. In addition to the above commissioned officers, forty-six Sub-Assistant Surgeons from the Civil Medical Department have been sent to Military duty. From this it will be realised what a strain has been put on the Civil Medical Department to meet the necessities of Government service. I am glad to be able to report that, *with very few exceptions*, the officers of all ranks have nobly responded to the call of duty, and have done without a murmur the heavy additional duties necessitated.

I have the honour to be,

Sir,

Your most obedient servant,

W. B. BANNERMAN, I.M.S., Surgn.-Genl.,

Surgeon-General with the Government of Madras.

ANNUAL RETURNS.

STATEMENTS A-J.

CLASSES I AND II.—These include all institutions maintained by Provincial funds and under Government management. The fact that an institution possesses endowments or receives contributions from Local Funds or private subscriptions should not be regarded as a reason for not classing it as 'State' so long as Provincial and Imperial funds are practically responsible for all the charges connected with it. Class I.—'Public' are State dispensaries which are open to the poorer classes of the public. Class II are State dispensaries which serve only a special section of the public as indicated in the sub-classification attached.

CLASS III.—Local Fund dispensaries include all institutions which are vested in Local Boards or Municipalities or guaranteed or maintained by Local or Municipal funds. The fact that such an institution is aided by private subscriptions, or receives assistance from Government in the shape of part of the salary of the medical officer, grants of medicine, or otherwise, should not be regarded as a reason for not classing it as a Local Fund dispensary so long as its existence is practically dependent upon Local Funds.

CLASS IV.—Comprises institutions supported by private subscriptions or guarantee, but receiving aid from Government or Local Funds.

CLASS V.—Comprises institutions maintained entirely at the cost of private individuals or associations. The fact that Government supplies superior inspection or registers should not be regarded as a reason for not treating it as a private non-aided dispensary.

CLASS VI.—Comprises all railway dispensaries whether maintained by State railways or others.

Class A = General institutions. Class B = Women and Children institutions.

* The difference is due to the exclusion of the Venkataramana Dispensary and Kalyani Hospital from the report. Rs. 2,11,300 was shown as balance on 31st December 1913 in the Victoria Caste and Gosha Hospital instead of Rs. 2,11,900.
